Seeking SWE Intern, Summer 2027. Full-stack & agentic AI. San Jose, CA.

## EDUCATION

- **California Polytechnic State University, San Luis Obispo** *Sep 2025 - Present (Expected May 2028)*  
**BS in Computer Science. GPA 3.97/4.0.**  
Coursework: Data Structures, Systems Programming, Computer Security (IP), Distributed Systems (IP).  
Activities: Theta Tau, CodeBox, Hack4Impact.

## EXPERIENCE

- **Software Engineering Intern** *Lindy, Jun 2026 - Aug 2026*  
Lead engineer of Routines, enabling agents on Lindy's high-volume AI platform to act on schedules and real-world events. Designed features from data model to UI, extended into workspace-wide Slack agents, and scaled to a managed catalog with fleet-wide rollout. Shipped **400+ PRs over 10 weeks**, owning Routines end-to-end and integrating it into Lindy Teammate, the company's biggest launch to date.
- **Freelance Website Developer** *Various Organizations, Jun 2021 - Present*  
Built and deployed sites for EuclidLearn, Care for Our Common Home, and STEMist Education.

## PROJECTS

- **Fere: Local Dev Environment Intelligence Platform** *Jan 2026 - Present*  
Developed a desktop dev tooling platform that visualizes local environments. Built AI-powered querying, debugging, and proactive background monitoring with service-scoped context and adaptive suggestions. Won **2nd place (\$10K)** at Cal Poly's Innovation Quest.
- **Clearance: Car Repair Shop Agent** *Jun 2026*  
Engineered a full-stack AI car repair shop agent at a 6-hour hackathon, using Scalekit for per-user identity and permissions and Actian VectorAI DB for job-history retrieval and quote grounding. Won **1st place (\$500)** in the Actian VectorAI DB track.
- **Impasse: AI-Powered Negotiation Training Platform** *Jan 2026*  
Engineered a full-stack AI negotiation simulator with agentic opponent, coaching, and analysis agents running concurrently at a 24-hour hackathon. Designed a multi-agent orchestration layer with real-time voice interaction via WebSockets, session analytics, and persistent storage.
- **Orbis: AI Agent Observability Dashboard** *Oct 2025 - Dec 2025*  
Built a full-stack observability platform and Python SDK for devs to instrument and track AI agent executions, costs, and performance in real time. Engineered interactive DAG visualizations mapping agent execution graphs, integrated prompt versioning, and built cost analytics across runs.
- **GU-Net: Diffuse Glioma Segmentation Research** *Jun 2023 - Jul 2023*  
Developed a novel U-Net-based architecture for segmenting diffuse gliomas in medical images under data and processing constraints, achieving **71.58% accuracy**. Applied advanced data augmentation to compensate for limited training data. Presented at UCSB and published in the Journal of Student Research.

## TECHNICAL SKILLS

- **Languages** · Python, TypeScript, JavaScript, Java, C, SQL.
- **Frameworks & Tools** · React, Next.js, Node.js, FastAPI, PyTorch, Electron, Tailwind, Git, GraphQL.
- **Concepts** · Full-Stack Development, Agentic AI, API Design, Machine Learning, Distributed Systems.

## HONORS & AWARDS

- Cal Poly Innovation Quest, **2nd Place (\$10K)**, Scalekit x Actian x Render Hackathon **1st Place (\$500)**
- National Merit Scholarship Finalist, Gold Presidential Volunteer Service Award x2
